## **SPAR Jiarong and Loscam Solve Produce Transport Problems in China**

LOSCAM, the industry leader in pallet and container pooling solutions, has announced Spar, the largest international food retail chain, will hire its new pallet cage to more safely move their fresh produce.

“Loscam's newly-designed pallet cages are able to help us effectively solve the packaging and transportation problems of our seasonal produce, especially for non-standard products like water melons and white gourd (Chinese winter melons),” Said Jason Tang, the Assistant President & Deputy GM of DC for Spar Jiarong, a franchisee of Spar.

The cage also responds to the challenges of long distance transport in China and the need to optimise truck fill to minimise transport costs. By being able to double stack the 750mm high cage, truck utilisation is increased whilst also achieving higher levels of product security and reduced damages. The cage also integrates to Loscam standard ECR pooled pallet in China, easily allowing transfer of equipment between trading partners.

“Pallet cages not only help to keep our merchandise fresh, but also save operations costs and enable us to standardize logistics packaging with our suppliers along the supply chain. We are happy to see that Loscam listened to our needs, delivered the right solution and always has the right customer-oriented attitude for continued improvement in their product design and services.” Jason added.

“We now have customers in the fresh produce sector using the cage to reduce the incidence of damage in transport and thus deliver a better quality product to their customers. The cages are also ideal for moving irregular sized and hard to transport products” says Gavin Li, Senior Commercial Manager for Loscam China.

Loscam's range of pallet cages, pallets and other containers help customers move their products across China in a more efficient, safe and timely manner. They are now being extensively used by retailers, manufacturers and wholesalers in China.
